

Assignment 6A

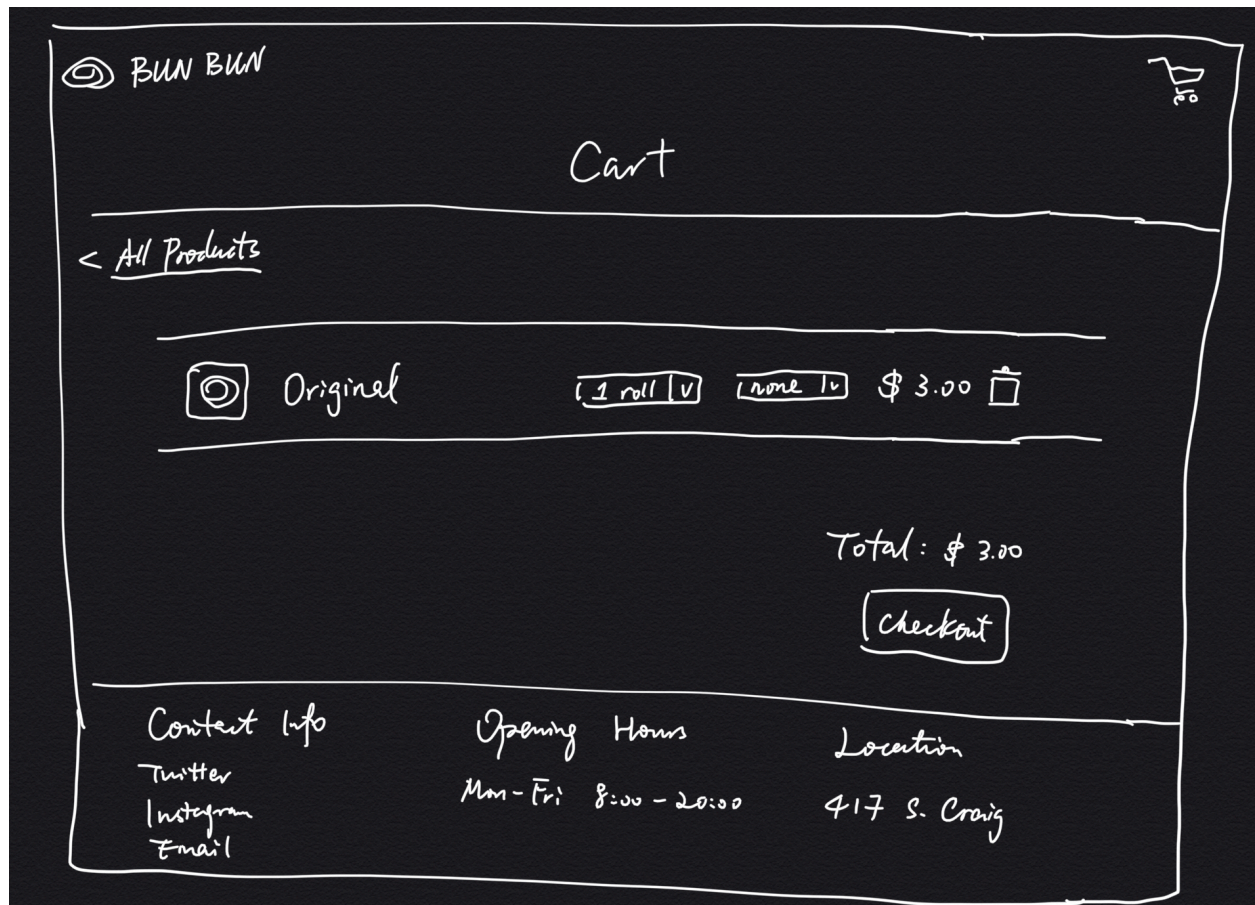

Adding Functionality to a Website with JavaScript

Programming Usable Interfaces

Yuwen Lu

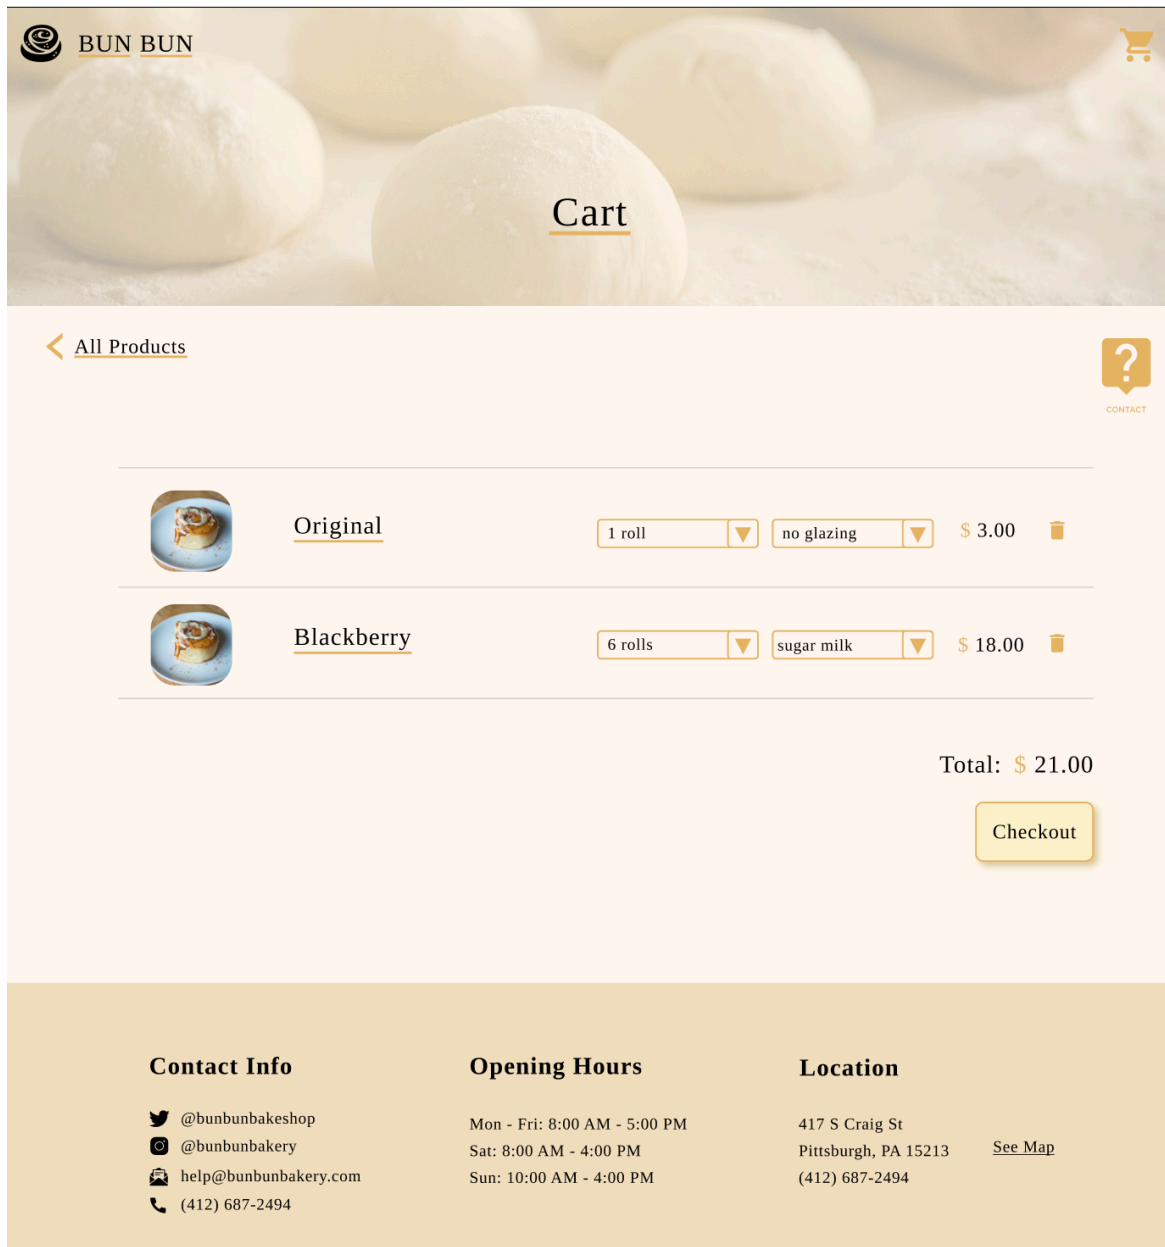

Oct 2020

1. Low-Fi Prototype

I designed the cart page aligning with the general style of my website. In the low-fi prototype, I followed the previous layout of my website: a header with a page title, a logo, a shopping cart icon and a background image. The “all products” back button helped users to recover from mistakes, and assisted users to navigate back to the product browsing page to add more items. A footer was attached at the bottom to display relevant information about the store.

2. High-Fi Prototype

On the high-fi prototype, I also continued using my previous design style. The use of warm golden color delivered a bakery feeling and gave the user an elegant impression of our brand. Putting the items in the center helps users to focus on their items about to purchase.

3. Web Prototype with JavaScript
